

Parth Singh *FullStack Developer*

 Bangalore, India  parth.singh564@gmail.com  +918073597221  Parth Singh  parthsingh17i
 <https://parthsinghportfolio.netlify.app>

Summary

Full Stack Developer with 4+ years of experience building scalable, secure web applications and computer programming. Proficient in designing robust backend systems with a focus on performance, optimization, and security. Known for strong verbal communication and problem solving skills, and for leading and coordinating end to end feature development across multiple workflows. Adaptable and driven to deliver impactful, high quality solutions aligned with business goals.

Skills

Programming Languages:

HTML, CSS, JavaScript, TypeScript, Python

Cloud & Infrastructure

AWS EC2, ECS,S3, Lambda, SQS,Redis, RabbitMQ

Backend & Security:

JWT, Bcrypt, Mongoose, System Design

Dev Tools

Git, JIRA, VS Code, Bitbucket, Postman,MongoDB, pgAdmin, GitHub,Claude,Cursor

Frontend & Backend Frameworks/Libraries/DBMS

React.js, Redux, Angular, Material UI, Bootstrap, Tailwind CSS, MongoDB, MySQL, Postgres ,Node.js, Next.js, Express.js

Professional Experience

Software Development Engineer (SDE-1)

03/2023 – present | Bangalore, India

Decorpot 

- **Backend API Design:** Implemented CRUD based RESTful APIs for multiple frontend dashboards & services facilitating seamless data flow for over 10k+ requests per day.
- **Security Enhancements:** Upgraded service tool for role based & user based access control RBAC & UBAC supporting 50+ user roles & 1000+ users, reducing API authorization latency and preventing security breaches across critical systems.
- **Frontend Development:** Built responsive interfaces for 8+ key dashboards including Project Approvals Tracker, Team User Logs, Service Tickets, Category Planner, and Checklist Approvals, using Redux for client-side state management and server-side pagination to render large datasets without degrading load times.
- **Established MongoDB Schemas:** Generated scalable, anti pattern safe, well indexed MongoDB schemas, handling 10M+ records & 600+ active users in high traffic modules like Ticketing Systems, Leads/Projects Management & more.
- **Integrated third party services** such as Cashfree and Pine Labs, significantly enhancing transaction reliability, payment logging accuracy, and overall financial operations efficiency.
- **Caching:** Implemented Redis-based server-side caching for high-traffic dashboard endpoints serving 600+ active users, eliminating repeated reads against 10M+ record collections and reducing database load during peak hours.
- **Tracking/Ticketing System:** Developed a web app for customers to track project status, estimations, POCs and payments/invoicing with details. <https://customer.decorpot.com/user-login> 
- **Code Quality & Release Ownership:** Mentored multiple junior developers and led knowledge-transfer sessions for senior engineers on internal systems and workflows, reviewed peer pull requests, on design patterns and schema design, and deployed feature branches to test and staging environments for validation prior to production release.

Certifications

Scaler Node JS, React and DBMS course

Scaler

Bangalore, India

Education

Bachelor of Engineering in Computer Science

Bangalore Technological Institute

Bangalore, India

Projects

Enterprise resource planning system

Developed and optimized multiple application flows and features, including robust database schema design, implementation of secure authentication using JWT, and architectural enhancements to support scalable and maintainable systems.
